

CLEARVU 10 ULTRASONIC DETERGENT

ClearVu 10 is an alkaline, water-based ultrasonic detergent formulated specifically to clean ophthalmic lenses. Used at economical dilution ratios, ClearVu 10 will remove residual blocking material, polishing slurry, organics and particles from all lens types after surfacing. To achieve optimum results ClearVu 10 should be used in heated ultrasonic tanks utilizing a maximum temperature of 130° F / 55° C.

Benefits:

- Economical
- Fully compatible with all lens materials
- Superior wetting ability
- Free rinsing – leaves no film or residue after rinsing
- Removes alloy or wax blocking material

Directions:

It is recommended that evaluation of ClearVu 10 begin at a dilution of 3% to 5% mixed with deionized (DI) water, although tap water that does not contain hard water ions is also acceptable. The dilution used, the operating temperature and other methods of use are ultimately determined by the degree and type of residue being cleaned. Other factors to consider include exposure time and the power of the ultrasonic equipment in use.

Additional Information:

ClearVu 10 is manufactured by Intersurface Dynamics, a leading manufacturer of Application Specific Chemicals for the optics, ceramics, electronics and ophthalmic industries. ClearVu 10 is available in one gallon bottles, cases (four bottles to one case) and five gallon pails. Material Safety Data Sheet is available upon request.
